

Title

GCP Data Engineer | Scalable ETL/ELT | Data Governance & Quality

Summary

GCP-focused Data Engineer with 4+ years of experience designing and leading enterprise-scale data platforms. Proven track record of modernizing legacy systems into Cloud-Native Lakehouse architectures on BigQuery and Dataproc. Expertise in orchestrating complex, dependency-rich batch pipelines using Airflow and PySpark. Skilled in implementing engineering standards, CI/CD automation (Tekton), and data governance frameworks to drive 40%+ latency reduction and 25% cost savings.

Employment

Data Engineer **Altimetrik India** **Sep 2021 – Mar 2026**

- **Data Platform Architecture:** Worked on the architectural migration of multi-terabyte datasets from legacy on-prem systems (Teradata/Hadoop) to a GCP Data Lakehouse (BigQuery, GCS), ensuring scalability and creating a single source of truth for analytics.
- **Complex Pipeline Engineering:** Designed and optimized robust PySpark ETL frameworks on Dataproc to process massive datasets. Implemented advanced logic for handling Slowly Changing Dimensions (SCD Type 2) and Change Data Capture (CDC).
- **Performance & Cost Optimization:** Reduced cloud costs by 25% through strategic BigQuery partitioning/clustering and Dataproc autoscaling policies. Tuned Spark configurations to optimize file sizes and minimize shuffle operations.
- **Governance & Observability:** Championed data quality by integrating automated validation checks (Python/SQL) and establishing observability using Airflow SLAs and logging, ensuring trusted and compliant data assets.

GCP Data Engineer **Apptad Technologies** **Mar 2026 – Present**

- **Supply Chain Architecture:** Analyzed and documented the architecture of a supply chain dashboard to improve system understanding and support data-driven decision-making

Skills

Core Cloud Data Stack: GCP (BigQuery, Dataproc, Cloud Storage, Cloud Composer/Airflow)

Big Data Processing: PySpark, Apache Spark, Hadoop, CDC Patterns (SCD Type 2), Data Modeling

Orchestration & DevOps: Apache Airflow (Astronomer), Tekton CI/CD, Git, Docker, Terraform (Basic)

Programming & Languages: Python, SQL

Governance & Visualization: Data Security, Cost Management, Power BI, Adobe Analytics (Ingestion)

Projects

Site Performance Analytics Platform (2025): Designed an end-to-end analytics pipeline ingesting Adobe Analytics data into GCP Cloud Storage. Utilized Dataproc (Spark) for complex transformation and modeled data in BigQuery to support a high-performance Power BI dashboard, enabling rapid KPI monitoring for business stakeholders.

Education

Rajiv Gandhi University of Knowledge Technologies **Jul 2017 – Aug 2021**

- B.Tech, Computer Science & Engineering (2021)

Certifications

Google Cloud Professional Data Engineer (Valid: 07/2026)
